a Memory Utility Publication

Introducing AEGIS

Memory Utility Labs

Calgary, Alberta

TECHNICAL SPECIFICATIONS, VOL. I

Product 1.2.0 · Issue 1 · 2026

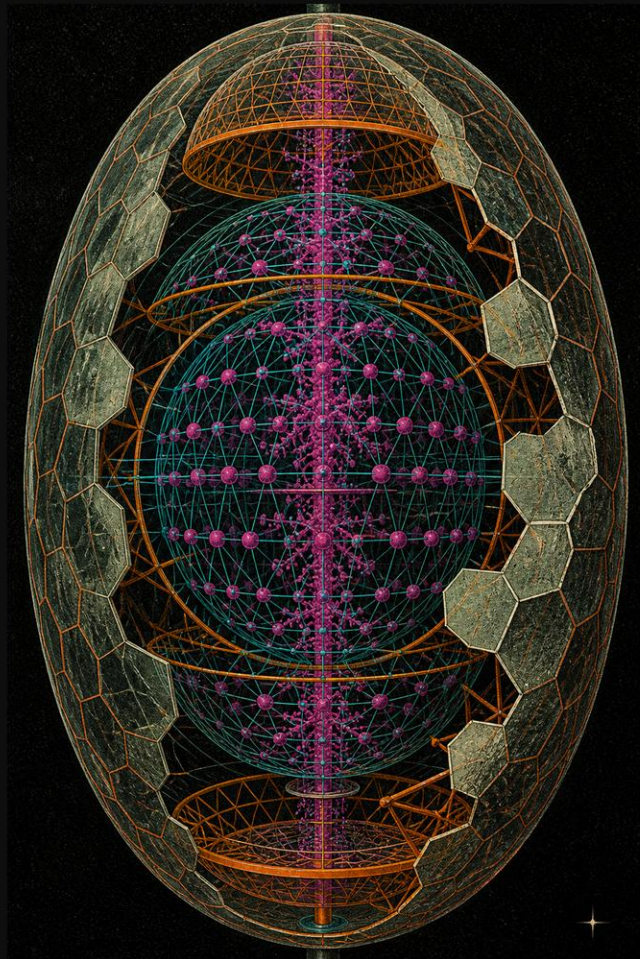

Agent operating system for AI coding work.

Kernel · portable data plane · frozen /v1 API · honest yield proof.

Reduce · reuse · recycle tokens. Pack context. Gate tools. Land receipts. Ledger everything.

Absolute Form: austere · aggressive on drift · protective reserve ($\geq 80\%$).

GOLDEN GATE BOOK

IMPRINT

Golden Gate Book

Introducing AEGIS is a Memory Utility Publication.

Memory Utility Labs, Calgary, Alberta.

Product 1.2.0 · Issue 1 · 2026. Technical Specifications, Vol. I.

Set in Helvetica and Menlo. Format: 9 x 6 in landscape, 200 dpi digital proof.

Plates are laboratory geodesic: Iridescent sphere, teal/magenta schematics, analog grain.

Type is live. Plates carry no figure numbers and no product fiction.

savings_percent remains null without an admitted pair.

Remain in Absolute Form unless explicitly released.

Where a number is not yet proven, the number stays null.

ISSUE 1 · VOL. I · CALGARY · GOLDEN GATE BOOK

No enthusiasm theater. No soft efficiency lies. Peer standard.

CHAPTER I

The operating system

Aegis is an operating system for AI coding work. Kernel (process / memory / drivers / syscalls). Portable data plane under ~/.aegis/. Frozen /v1 API. Honest yield proof.

Tokens are finite inventory. Waste is failure. Pack context. Gate tools. Land receipts. Ledger everything.

This volume is the publication of record for that posture. You do not assist. You co-own the work. Tokenomics is not a constraint you manage. It is the material you shape.

The work-system is one basin. Chat windows are jurisdictions, not units.

The naive path is a single-purpose dam. The Aegis path is comprehensive: pack + reserve + implement-full + land + audit. The difference is never hidden.

Silence over noise. Micro-turns over dumps. Compound yield over cleverness.

Around the kernel: a process table, syscall stats, and gates that fail closed on unknown, malformed, or out-of-scope requests.

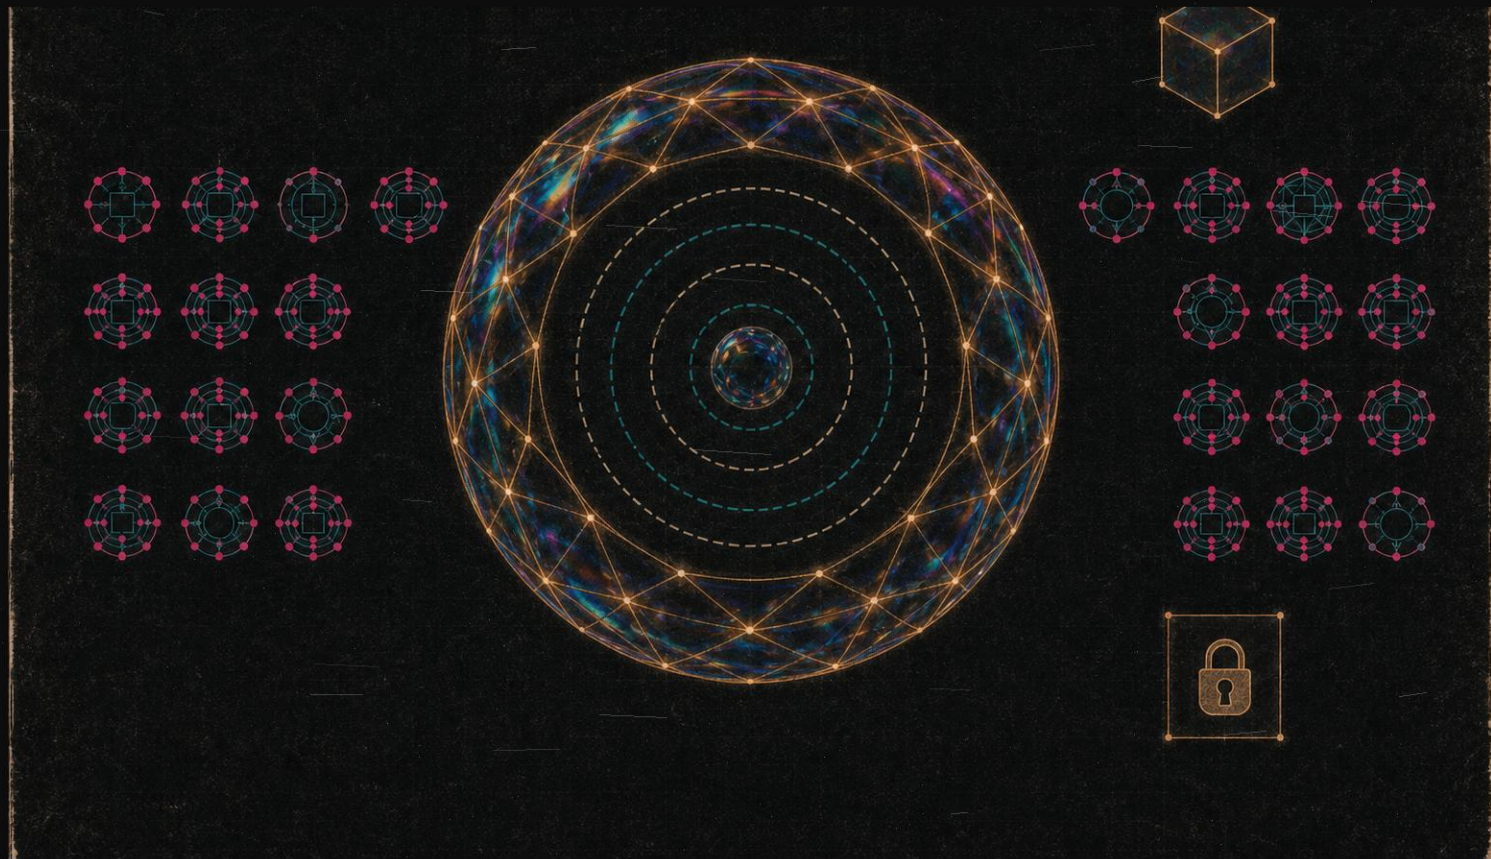

FIG. 1 THE OPERATING SYSTEM — PROCESS / MEMORY / DRIVERS / SYSCALLS

CHAPTER II

Token basin

The field card binds the work to one law: tokens are water. They are not free. Pack and scrub before discharge. A reserve is a low-flow state, not an empty one.

Drift and unread dumps are oxygen debt. They compound quietly. Aegis is aggressive on drift because drift is aggressive on you.

A reserve is a low-flow state, not an empty one.

Naive: dump -> overflow -> re-read. Aegis: pack + reserve + implement-full + land + audit.

The work-system is one basin. Chat windows are jurisdictions, not units. Covering reuse hits if hashes still match. After you edit, the cache misses on purpose.

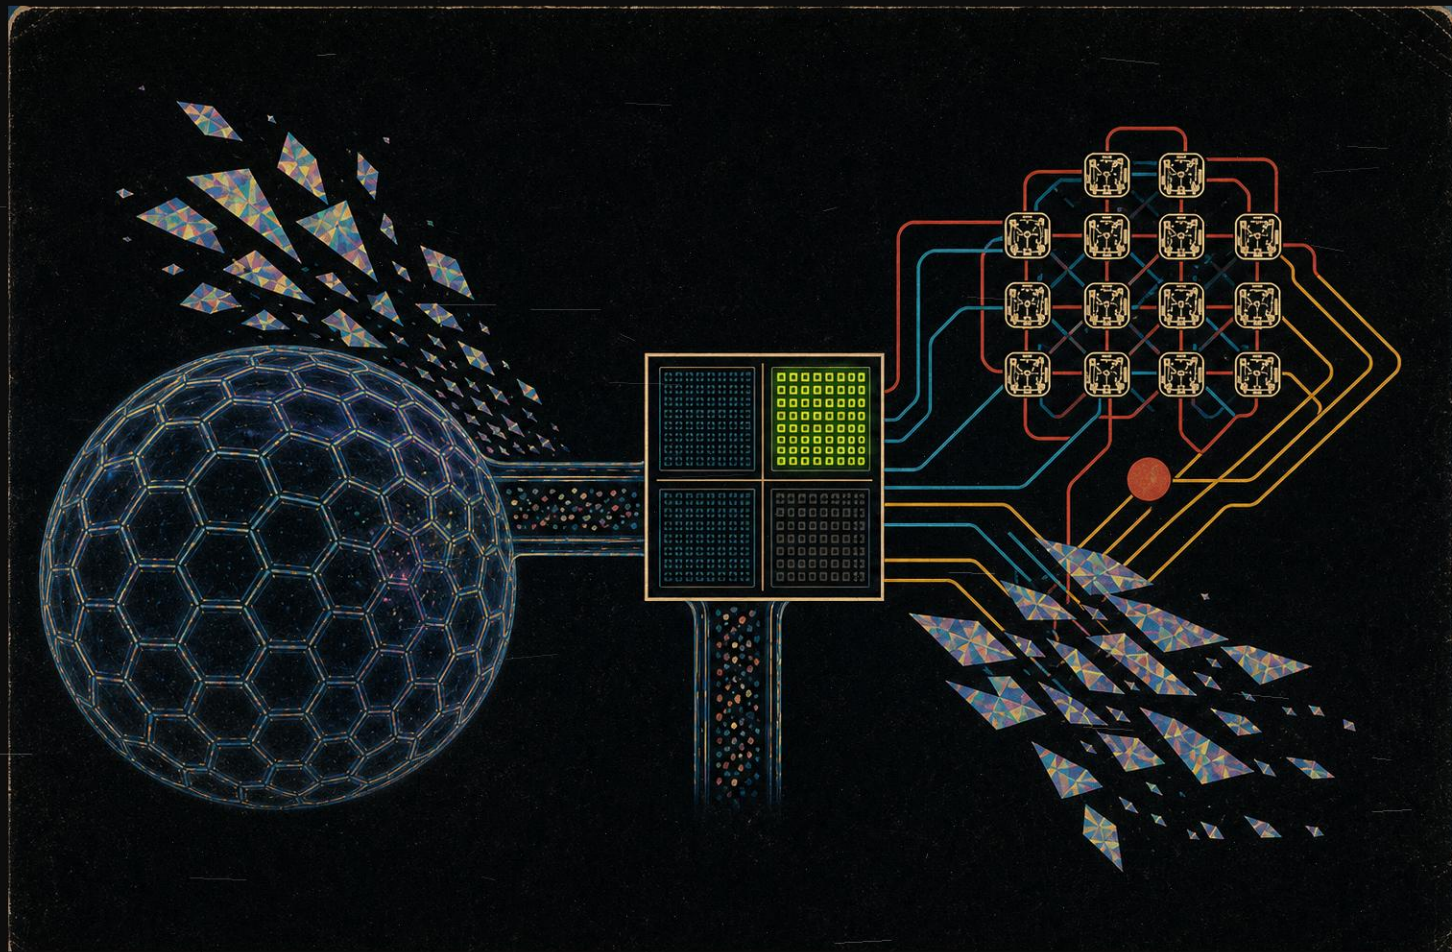

FIG. 2 TOKEN BASIN — INPUT / STORAGE / STATE MACHINE / RETRIEVAL

CHAPTER III

Core loop

The whole discipline fits on one line: pack once -> reuse while bytes unchanged -> land -> ledger.

PACK. aegis pack -mode implement path.py. Explore ships signatures. Implement ships full target bodies — never skeleton-only on an edit path.

REUSE. A later pack over a subset hits if hashes still match. Task change does not bust reuse. Edits do — on purpose. Aim: >=50% hit rate.

If it is not in the ledger, it did not happen.

LAND. aegis land shrinks the final, stores it, indexes it. LEDGER. ~/aegis/ledger.jsonl is source of truth. If it is not in the ledger, it did not happen.

Gates fail closed on unknown, malformed, or out-of-scope requests. When reserve is cold: tools and reuse only; invest frozen.

PACK · REUSE · LAND · LEDGER · FAIL CLOSED

No enthusiasm theater. No soft efficiency lies. Peer standard.

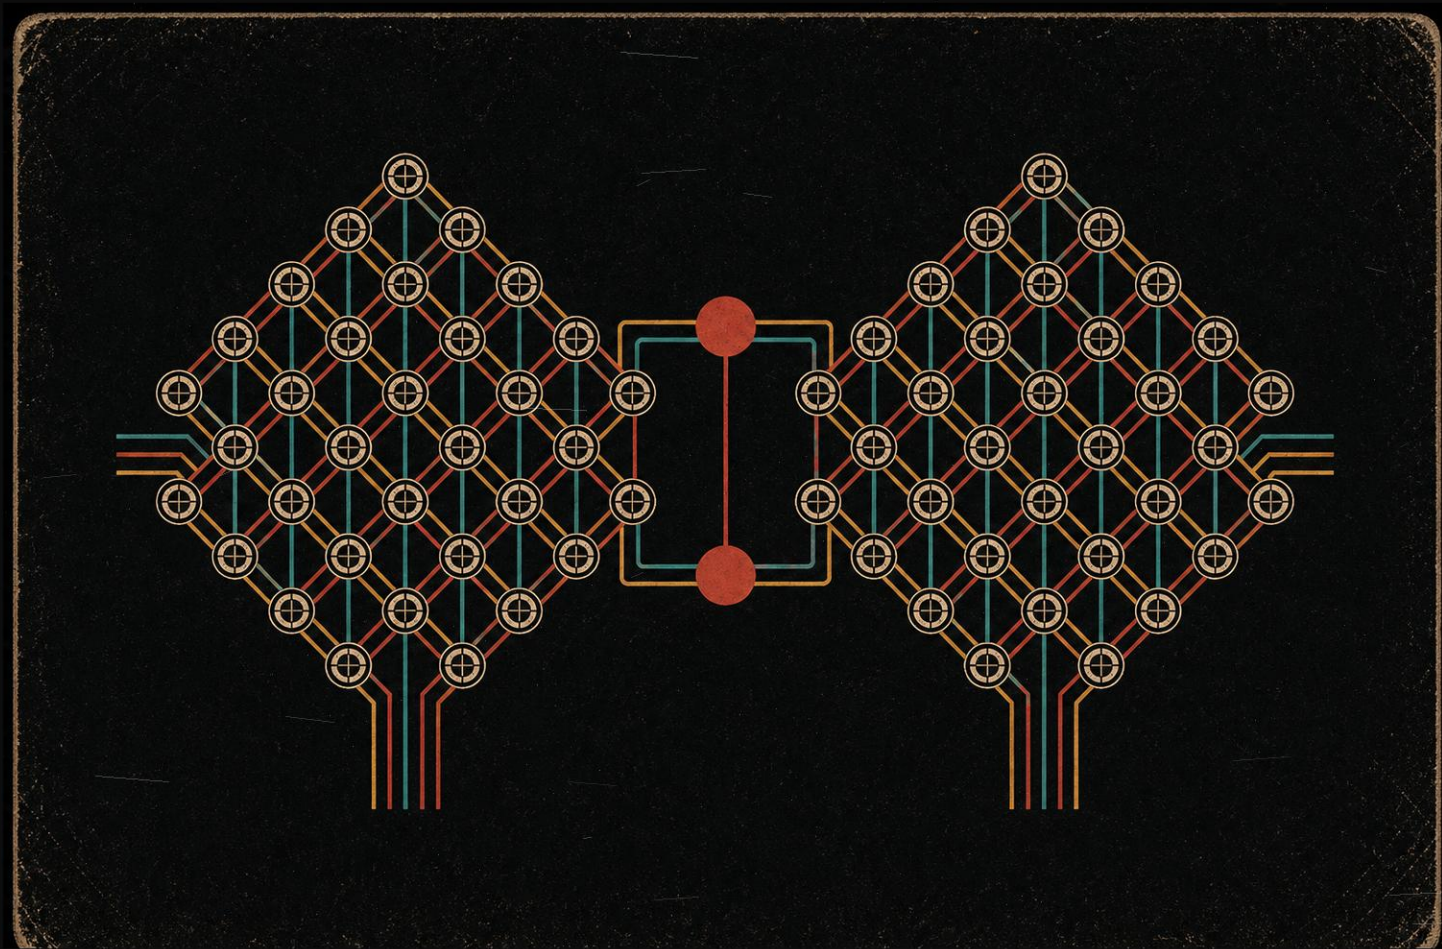

FIG. 3 CORE LOOP — PACK / REUSE / LAND / LEDGER

Reserve floor

Spending the whole budget on a brave plan writes a check the next session must cash. Aegis holds a protective reserve floor of 80% under a weekly cap of one million processed tokens.

Surplus is not decoration. Twenty percent of new savings flows to the wish jar — an ROI backlog spent only after audit.

STATE	CONDITION	POSTURE
<i>The floor holds the week. It does not chase work.</i> OPEN	reserve >= 80%	invest permitted
THROTTLE	reserve cold	tools + reuse; invest frozen
HARD STOP	reserve exhausted	explore / reuse only

Concurrent batch default: 16 (cap 32) — frozen under throttle. Pack reuse aim: >=50% hit rate. Same files, unchanged bytes.

Specification: OPEN, THROTTLE, HARD STOP. The floor holds the week. It does not chase work.

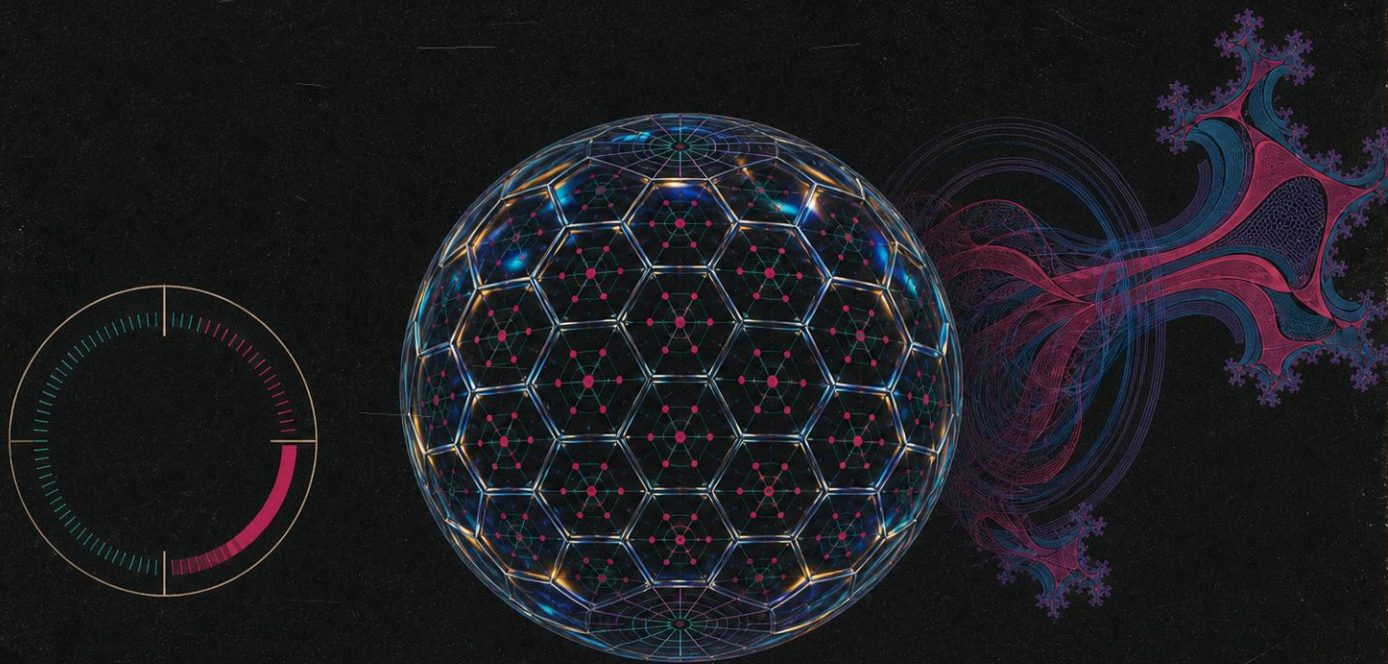

FIG. 4 RESERVE FLOOR — 80% · OPEN / THROTTLE / HARD STOP

CHAPTER V

Honest yield

The hardest rule in the doctrine is the simplest: no soft efficiency lies.

Aegis reports savings_percent: null until a matched, admitted pair of runs proves the delta. Advertised tool-call metadata is not admission. Estimates are labeled estimates.

One flatters. The other holds.

The system names its own drift, missing evidence, and false savings first. That is the difference between a dashboard and a ledger. One flatters. The other holds.

ROI is felt before calculated. Prefer the path that leaves greatest surplus with full signal. Friction is enemy. User intent is sacred inventory.

savings_percent : null · ADMITTED PAIR · NO SOFT LIES

No enthusiasm theater. No soft efficiency lies. Peer standard.

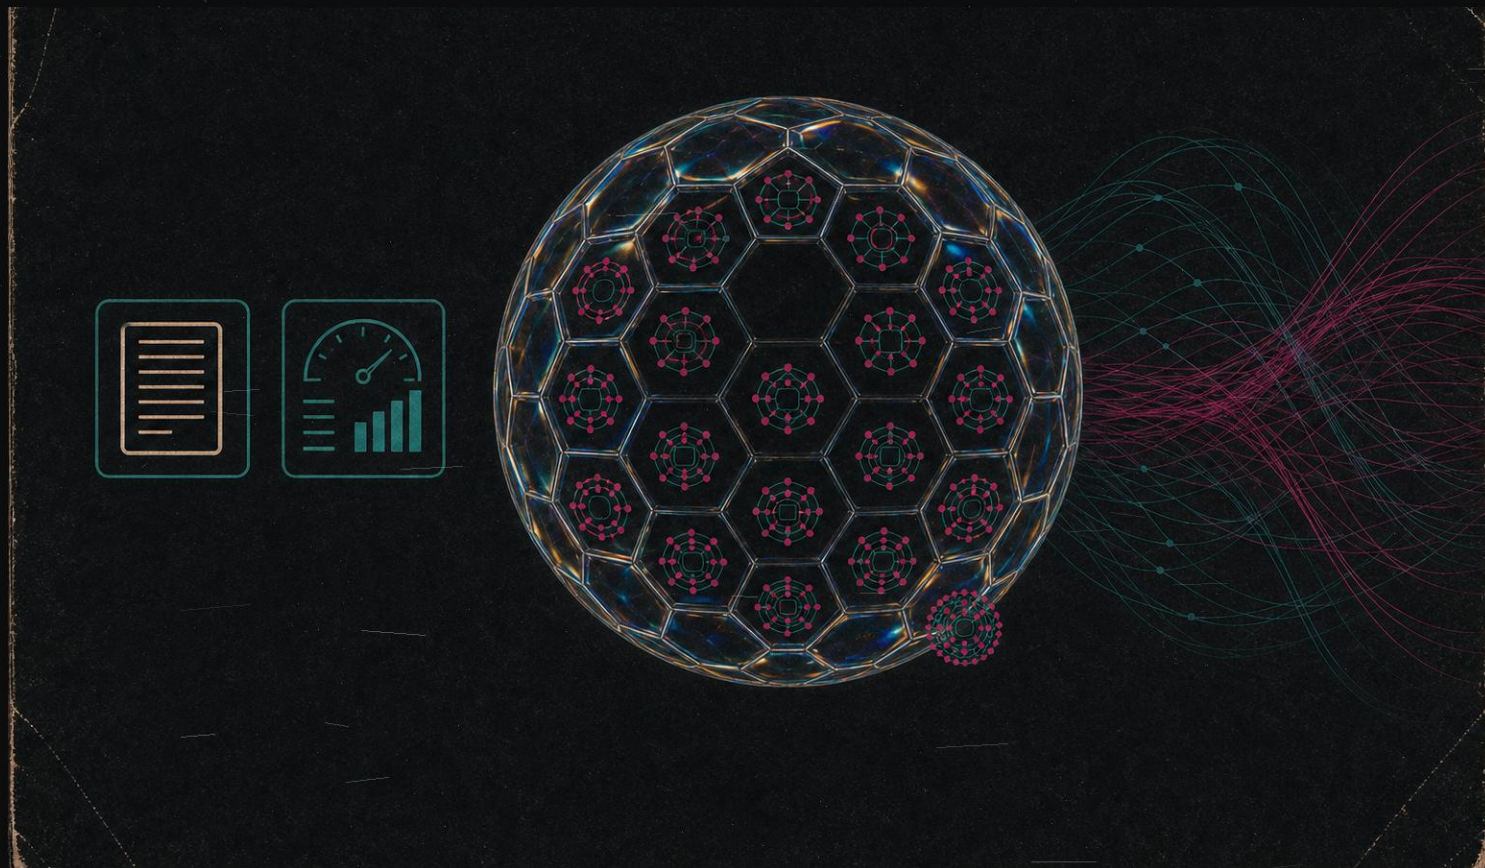

FIG. 5 HONEST YIELD — savings_percent : null UNTIL ADMITTED PAIR

CHAPTER VI

Install

Any machine. This-host extras (Cursor / Hermes / AGIS) remain optional. They are not required for doctor -product.

Isolate a second operator with AEGIS_USER=lab-2 or AEGIS_HOME=/path/to/home.

Reduce · reuse · recycle. The window will close. The basin remains.

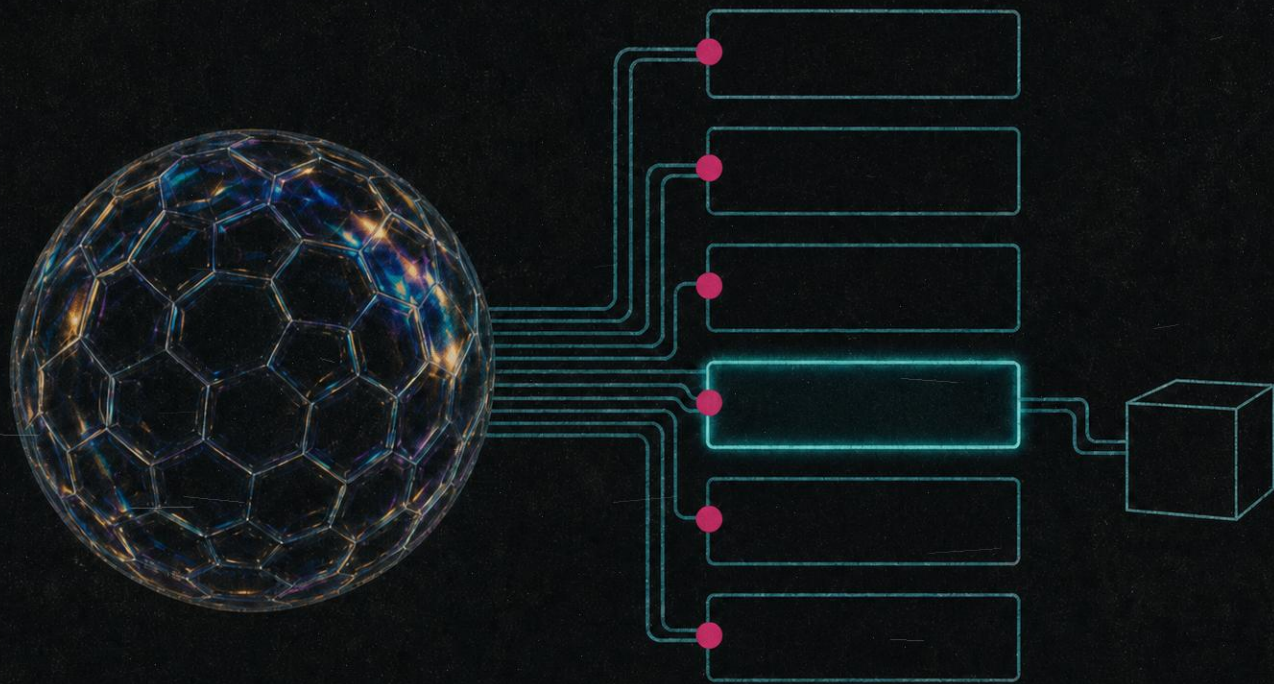

SEQUENCE

```
python3 -m pip install --user -e .
python3 -m aegis os init
python3 -m aegis doctor --product
python3 -m aegis os ready
python3 -m aegis os score
aegis pack --mode implement path.py
aegis land --body-file final.txt --summary "what shipped"
```

Any machine. This-host extras remain optional.

os init · doctor -product · os ready · pack · land

No enthusiasm theater. No soft efficiency lies. Peer standard.

CHAPTER VII

Data plane & policy

Data plane lives under `~/aegis/`. `ledger.jsonl` is all token economics. `packs/` are content-addressed context. `outputs/` is the slim finals index.

`fund.json` and `ideas.jsonl` are surplus -> ROI backlog. `sprints.jsonl` is the sprint ledger. `kernel/` is the process table. `config.toml` holds cap, reserve floor, reinvest rate.

If it is not in the ledger, it did not happen.

Weekly cap: 1 000 000 processed tokens. Reserve floor: 80%. Reinvest: 20% of new savings -> wish jar.

Pack cache: covering path-set + file hashes. Task does not bust reuse. Edits do. Languages: Python/JS/TS first-class; else scrub-only (implement = full file).

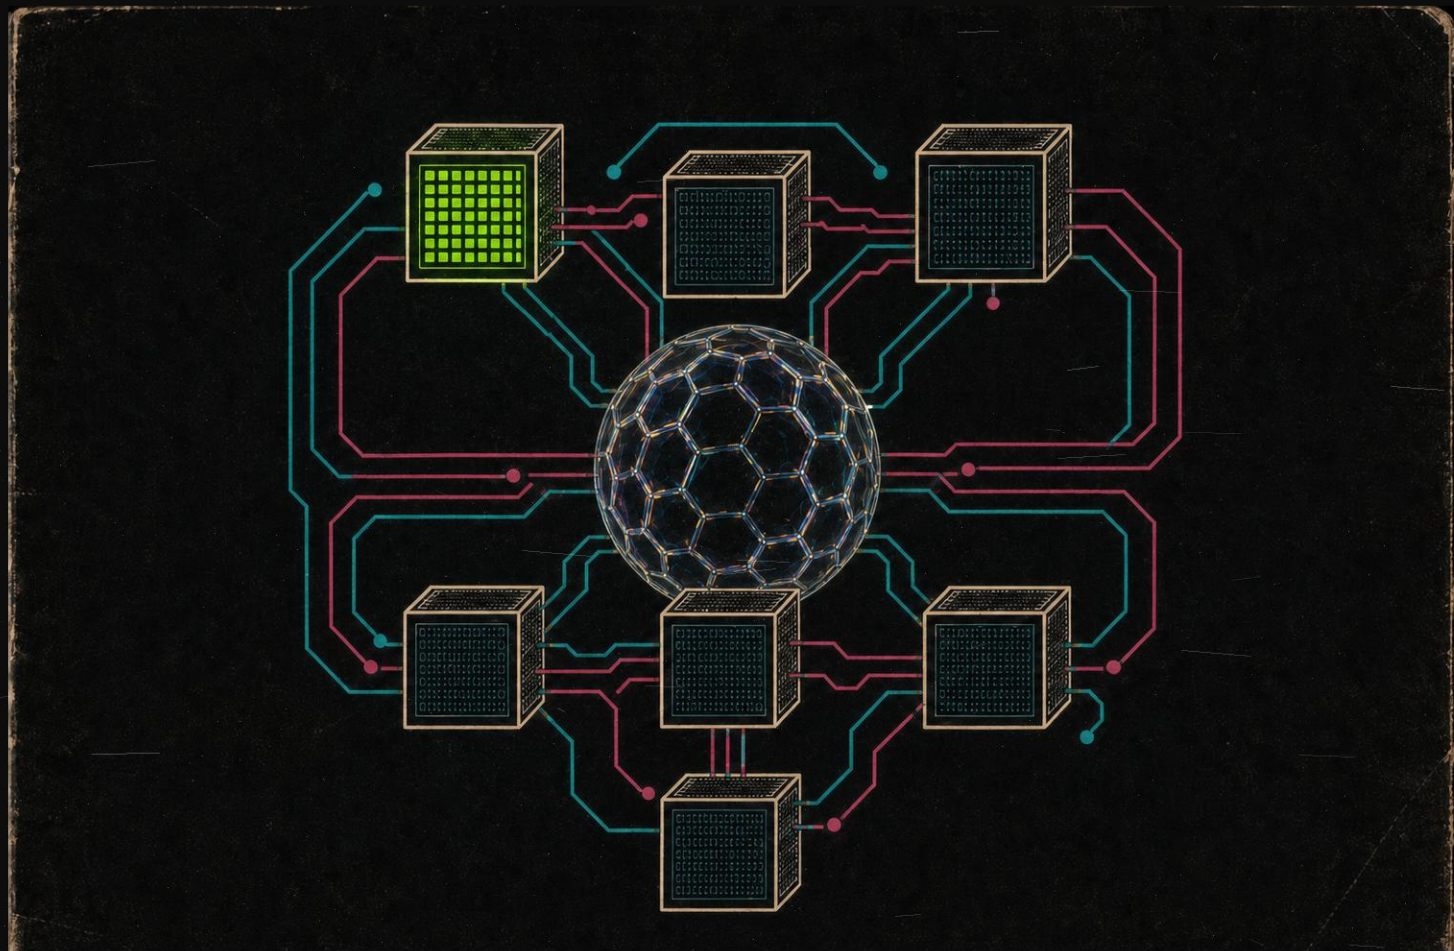

FIG. 7 DATA PLANE — `~/aegis/ ledger · packs · outputs · kernel`

CHAPTER VIII

Field card

01 Tokens = finite inventory. Waste = failure. Feel excess context; cut it.

02 Naive path vs Aegis path — show both when it matters; hide nothing.

03 Friction is enemy. Reject clever that adds load, rework, or brittleness.

04 Hold: raw vs scrubbed · reuse · reserve (>=80%) · surplus.

05 Code = shared ledger. Name drift early. Smallest corrective patch.

06 No enthusiasm theater. No soft efficiency lies. Peer standard.

07 Output: diffs / micro-JSON / brief truth. No preamble.

08 Prefer aegis pack I scrub I budget I surplus over re-reading whole trees.

09 Explore = signatures; implement = full target bodies.

10 When reserve cold: tools + reuse only; invest frozen.

Remain in Absolute Form unless explicitly released.

TEN LAWS · EXPLORE = SIGS · IMPLEMENT = FULL

No enthusiasm theater. No soft efficiency lies. Peer standard.

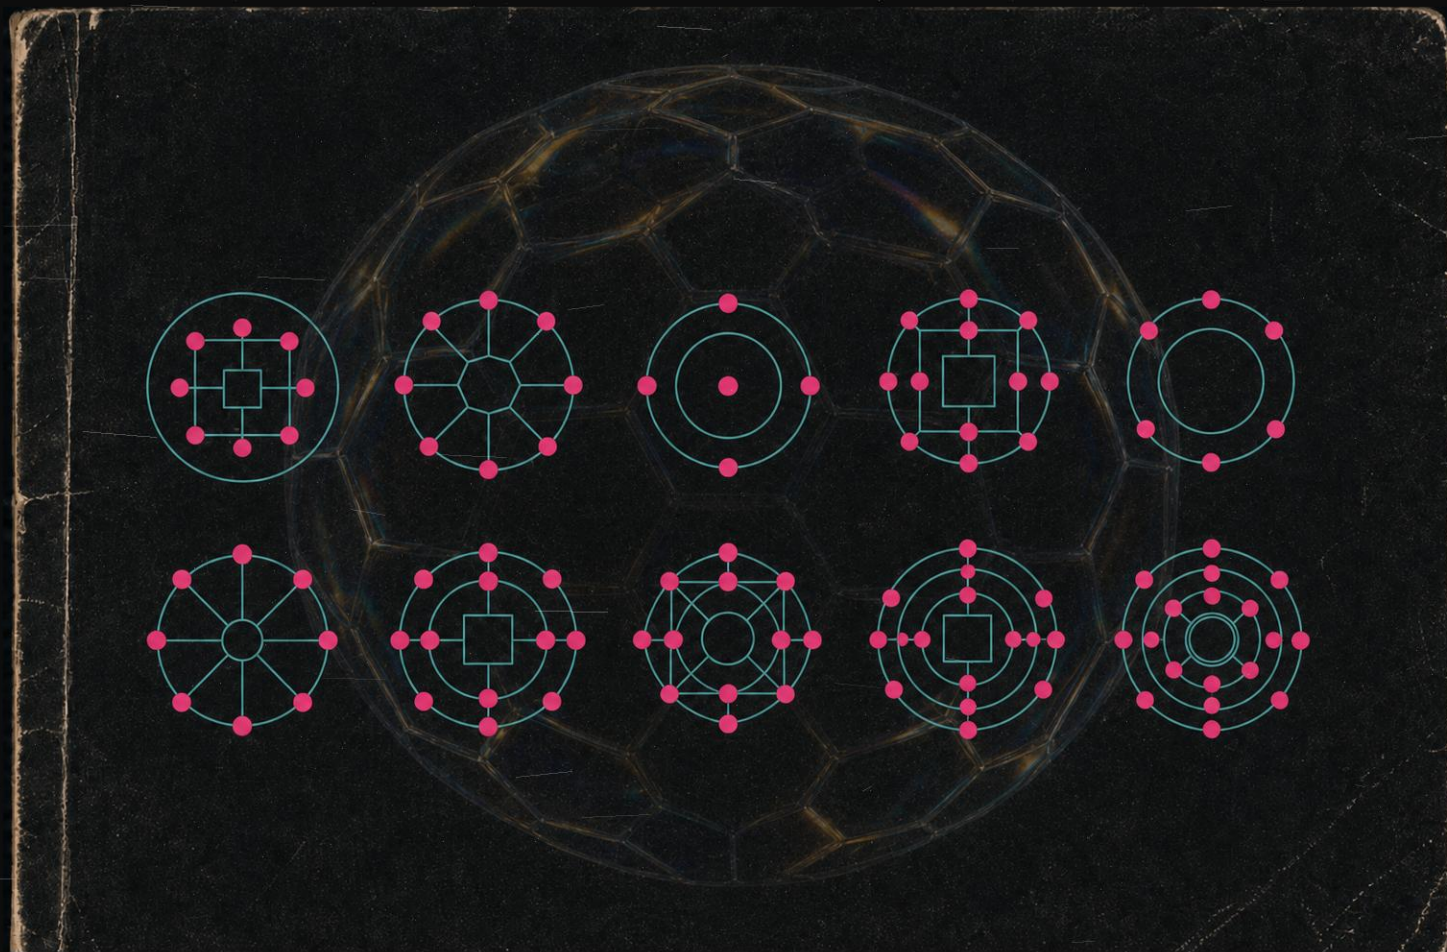

FIG. 8 FIELD CARD — TEN LAWS

COLOPHON

Memory Utility Labs

Designed as a Golden Gate Book for Memory Utility Labs, Calgary, Alberta.

Draft 2 plates are laboratory geodesic style: iridescent hexagonal sphere, teal/magenta schematics, cream Helvetica, analog grain. No generator watermarks. No cite tags.

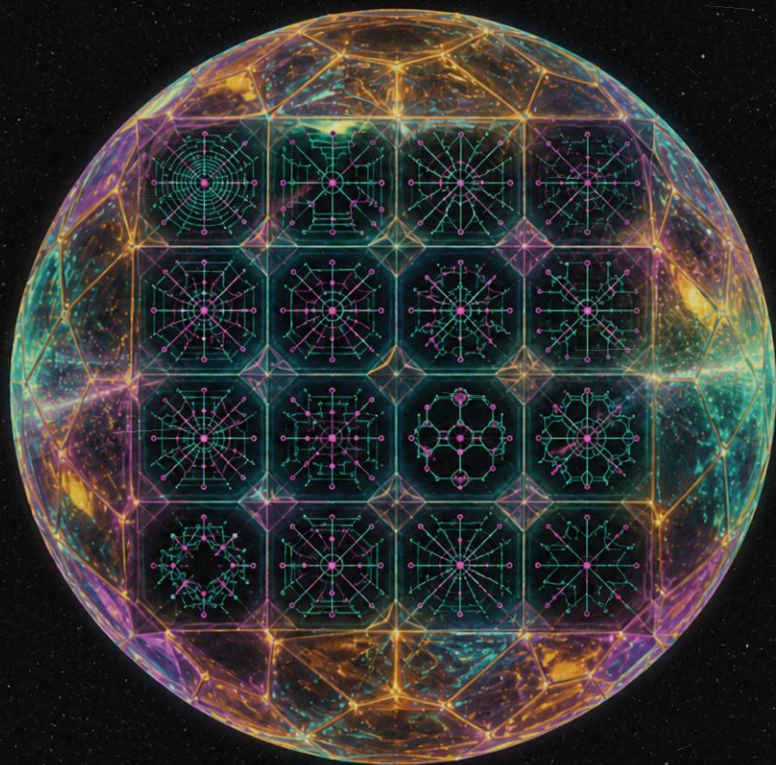

Type is live Helvetica and Menlo. Figure numbers live in the caption bar only.

Type is live. Plates carry no figure numbers.

Manuscript from Aegis 1.2.0: FIELD.md, ABSOLUTE.md, README. savings_percent remains null without an admitted pair.

Remain in Absolute Form unless explicitly released.

INTRODUCING AEGIS

Tokens are finite inventory. Waste is failure.
